

VoiceWise

COMPREHENSIVE BIOMETRY REPORT

Executive Summary

This report harnesses the power of advanced voice-analysis technology to detect dysfunction within the human body. We run over 1,100 biometric data points through our computational blueprint in order to conclude the percentage of health for the 5 pillars of health, each organ, and each system. Additionally, the report determines the most chronic and acute aspects to pay attention to, along with where the cause of the imbalance is stemming from and whether it is more from the physical or emotional factors.

Summary of Results

1. The first pillar of health to support is **Nutrition**
 - a. Correlation to the **Thyroid Gland**
2. The first system to support is **Hormone**
 - a. **Physical** influence
 - b. **Parathyroid Gland, Pineal Gland, and Uterus** contributing most to Hormone imbalance
3. The second system to support is **Immune**
 - a. **Physical** influence
 - b. **Breast, Liver, and Lymphatic** contributing most to Immune imbalance
4. pH Environment
 - a. **Physical and Emotional** influence
 - b. **pH Control in Body Fluids, Nutrition, and Impact of Acidic Substances** contributing most to pH Environment imbalance

Key for the Report

Percentage (%)

Serving as a gauge to the health status for all organs and systems

Emotional vs. Physical Factors

Emotional Factors = Intellectual, Emotional, Behavioral, and Spiritual

Physical Factors = Molecular, Biomaterial, Organ, and Systemic

Acute vs. Chronic

Acute Priority,
which means it is
a more recent
imbalance and
strong possibility
of inflammation.

Chronic Priority,
which means it is
a more long-term
or ongoing
imbalance.

5 Pillars of Health

The Pillar of Health you need to support most right now is **Nutrition**, which is impacting the **Thyroid Gland**.

Improve **Nutrition** Step 1

Mindful Eating: Practice mindful eating by paying attention to your food and eating experience. Slow down to chew your food thoroughly, and savor each bite. Engage your senses and be aware of the flavors, textures, and smells of your meals. This mindful eating practice helps promote better digestion, prevent overeating, and enhance the enjoyment of your food.

Improve **Nutrition** Step 2

Count Chemicals, Not Calories! Get into the habit of reading food labels when making informed choices. Look for products with simple and recognizable ingredients. If you cannot pronounce it, reconsider eating it! Pay attention to the serving size, calories, added sugars, and the presence of any artificial additives. This allows you to make healthier choices and understand what you're consuming.

Masters of Function

Top Priorities

Hormone System - Chronic

The **Parathyroid Gland, Pineal Gland, and Uterus** appears to be contributing to a **Chronic Hormone** indication that is more influenced from a **physical factor**.
