

# VoiceWise

## COMPREHENSIVE BIOMETRY REPORT

### Executive Summary

This report harnesses the power of advanced voice-analysis technology to detect dysfunction within the human body. We run over 1,100 biometric data points through our computational blueprint in order to conclude the percentage of health for the 5 pillars of health, each organ, and each system. Additionally, the report determines the most chronic and acute aspects to pay attention to, along with where the cause of the imbalance is stemming from and whether it is more from the physical or emotional factors.

### Summary of Results

1. The first pillar of health to support is Hydration
  - a. Correlation to the Stomach
2. The first system to support is Immune
  - a. Emotional influence
  - b. Thymus, Kidneys, and Breast contributing most to Immune imbalance
3. The second system to support is pH Environment
  - a. Physical and Emotional influence
  - b. Heavy Metal Toxicity, Blood pH, and Acidosis contributing most to pH Environment imbalance
4. pH Environment
  - a. Physical and Emotional influence
  - b. Heavy Metal Toxicity, Blood pH, and Acidosis contributing most to pH Environment imbalance

# Key for the Report

## Percentage (%)

Serving as a gauge to the health status for all organs and systems

## Emotional vs. Physical Factors

Emotional Factors = Intellectual, Emotional, Behavioral, and Spiritual

Physical Factors = Molecular, Biomaterial, Organ, and Systemic

## Acute vs. Chronic

Acute Priority,  
which means it is  
a more recent  
imbalance and  
strong possibility  
of inflammation.

Chronic Priority,  
which means it is  
a more long-term  
or ongoing  
imbalance.

## 5 Pillars of Health

The Pillar of Health you need to support most right now is **Hydration**, which is impacting the **Stomach**.

### Improve Hydration Step 1

Drink HOT plain water! Think about when you wash dishes...hot water unsticks things much easier than cold water. Well, the same idea applies to your water - we can use the warmth and hydration to improve the elimination of internal toxins. So before you fill your thermos for the day, use an electric kettle to heat the water first.

### Improve Hydration Step 2

Monitor Urine Color: Pay attention to the color of your urine as it can be an indicator of your hydration levels. A light, pale yellow color generally indicates good hydration. If your urine is dark yellow or amber in color, it may be a sign of dehydration, and you should increase your water intake.

# Masters of Function

## Top Priorities

### Immune System - Chronic

The Thymus, Kidneys, and Breast appears to be contributing to a Chronic Immune indication that is more influenced from an emotional factor.

### pH Environment System - Chronic

The Heavy Metal Toxicity, Blood pH, and Acidosis appears to be contributing to a Chronic pH Environment indication that is more influenced from an emotional factor.
